
Product Manager – AI-driven Decision Systems | Data Products

Senior Product Manager with 6+ years of hands-on product experience building AI/ML-driven systems and data products. Experienced in designing end-to-end decision platforms that combine structured data pipelines, behavioral modeling, recommendation systems, and human-in-the-loop workflows to drive measurable business outcomes. Strong track record of translating ambiguous business problems into scalable AI-enabled products and operational systems.

EXPERIENCE

Senior Product Manager | 2019 - Present

Goals101, an M2P Group Company | Microsoft & Google Startup Accelerator Alumni

- Product roadmaps were constrained by tightly coupled legacy systems and slow implementation cycles. Built a primitives + tenets framework for AI-assisted product development, reducing execution timelines from ~6 months to 2 weeks and saving ~₹1.2Cr in projected implementation costs.
- Static demographic segmentation led to inefficient portfolio growth and low campaign relevance. Redesigned the platform into a behavioral growth system using clustering and recommendation models, driving 40–60% increases in average transaction size and ~5x improvement in transaction frequency.
- Inconsistent transaction descriptions reduced the reliability of downstream targeting and rewards systems. Built a hybrid AI + rule-based transaction intelligence system that converted noisy financial data into structured signals, improving targeting precision by ~25–30%.
- Banks lacked actionable portfolio intelligence despite large-scale transactional data availability. Built and launched a B2B analytics product from 0 -> 1, generating ₹6M+ in first-year revenue and establishing a new business line.
- Product implementation cycles were slowed by fragmented tribal knowledge and dependency on SMEs. Built an AI-enabled implementation copilot within an enterprise integration platform, reducing implementation turnaround time by ~75% through contextual knowledge retrieval and workflow automation.

Software Developer | 2017-2019

Simplifii Labs Pvt Ltd, SoftechPedia Pvt Ltd

- Built scalable web applications & improved delivery efficiency (**30% faster turnaround**), developing strong foundations in system design & engineering collaboration.

EDUCATION

B. Tech, Computer Science | Maharaja Agrasen College, Delhi University | **80.52%**

XII Standard | Doon Blossoms School, I.S.C | **91.2%**

X Standard | Doon Blossoms School, I.C.S.E | **90.7%**

SKILLS

- AI/ML Product Management
- Decision Systems
- Human-in-the-Loop Systems
- Data Modeling & ETL Pipelines
- Product Strategy & 0 -> 1 execution
- Platform Products
- B2B SaaS
- Explainability & Auditability
